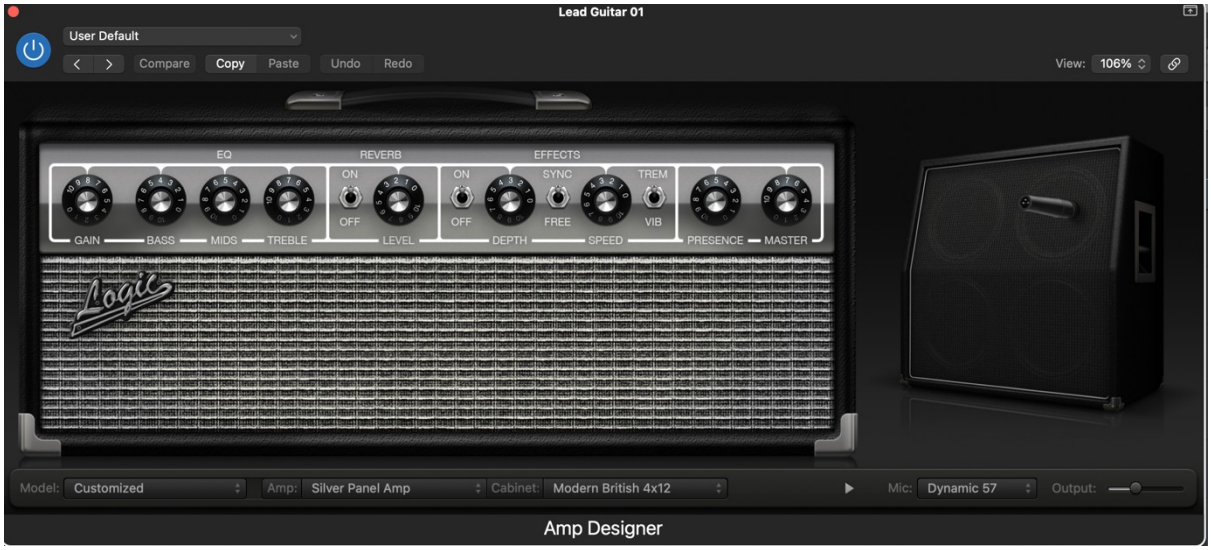
Mixing Go your own way guitar tracks.

Guitars

Add guitar amp plugins to the guitars. Choose your amp type and adjust to taste.



Add compression to the guitars to reduce the dynamic range by 5dB. Use the compressor cheat sheet to help you decide which type to use.

Add contrasting amounts of delay to guitar 1 and guitar 2. Here is an example of a suitable setting.

Pan the guitars appropriately. E.g. guitar 1 slightly left, guitar 2 slightly right

EQ out the very low end and boost the treble as you think appropriate: Here is an example.

Double track the electric guitar 03

Bass guitar
Add a bass amp. Choose your sound using the square brackets to flick through presets. [ ]
Add compression to the bass as you think appropriate. (Use the compression cheat sheet to help you decide which compressor to use).

Overall mix
Balance all the tracks and bounce down your final mix.

Write up
Write up how you mixed the track on your Sway blog with screenshots and upload your bounce down to Sway.
